

# STAY PREPARED WITH A PROTECTION PLAN

Home repair costs can add up fast. But with an Infinite Energy protection plan, you'll get prompt, cost-effective service to help fix the problems you're having. Take a look at what we offer:

## SURGE PROTECTION

With an average of about 25 million lightning strikes each year, it's no wonder there's so much damage to homes and businesses from power surges in the U.S. But at Infinite Energy, we've got you covered. We offer separate plans to protect your electronics and appliances, or you can choose a Whole Home plan that covers both.

### ELECTRONICS

covers cost to repair:

- TV
- Game console
- PC or laptop
- Telephone

### APPLIANCES

covers cost to repair:

- Washer and dryer
- Oven and cooktop or range
- Dishwasher
- Refrigerator/freezer

## WHOLE HOME

With a Whole Home protection plan, you get surge protection on all the items included under the Electronics and Appliances plans.

## WATER HEATER

No one looks forward to an ice-cold shower first thing in the morning—or at any time of the day or night. But with an Infinite Energy water heater protection plan, a qualified repair technician is just a phone call away.

## PLUMBING

Don't get stuck with clogged drains, busted pipes and dripping faucets. The average plumbing repair in the U.S. costs between \$175 and \$450. And that doesn't include the cost to fix your wet walls, floors and ceilings that are likely to rot and mold.

With an Infinite Energy plumbing protection plan, we'll send a licensed professional to your home to inspect and repair the issues causing your plumbing emergency (**covers plumbing up to your home's water main**).

## INSIDE WIRING

Each year in the U.S., an estimated 51,000 fires break out in homes due to electrical issues—causing deaths and more than a billion dollars in damage. Don't gamble with wiring that's frayed or exposed. Go with a safe bet: an Infinite Energy inside wiring protection plan. Sign on, and we'll send a licensed electrician to fix any damaged wiring in your home (**covers wiring in your home up to your home's electricity meter**).
